

	<b>PES University, Bengaluru</b> (Established under Karnataka Act No. 16 of 2013)	<b>UE20CS935</b>
<b>March 2024: END SEMESTER ASSESSMENT (ESA)</b> <b>M TECH DATA SCIENCE AND MACHINE LEARNING_ SEMESTER II</b> <b>UE20CS935: Introduction to Deep Learning and Applications</b>		
Time: 3 Hrs	Answer All Questions	Max Marks: 100
<p style="text-align: center;"><b>Instructions</b></p> <ol style="list-style-type: none"> <li>Answer all the questions.</li> <li>Section A should be handwritten in the answer script provided.</li> <li>Section B and C are coding questions to answered in the system and uploaded.</li> </ol>		

		<b>SECTION-A (20 marks)</b>	
1	a)	What are causes of overfitting in a deep learning model? Name 2 methods which can be used to resolve the overfitting issue in such architecture.	4
	b)	What is the usage of Convolution layer, pooling layer and dense layer in Convolution Neural Network (CNN) architecture?	4
	c)	What is the Vanishing Gradient Problem in deep learning models? How to get rid of this?	4
	d)	List down various performance metrics used for object detection. What is the use of non maximal suppression in Object detection algorithms?	4
	e)	What is the requirement of an activation function in deep neural network architecture? Define the following activation functions and their usage, Tanh(), ReLU() and Softmax().	4
<b>SECTION-B (40 marks)</b>			
2		Build a Convolution Neural Network to classify the 6 different types of food types. Dataset_Folder Name: <b>Food Classification</b> Conditions to consider: <ul style="list-style-type: none"> <li>Parameters should not cross 200000</li> <li>Should not use more than 4 layers (except input and output, including convolution and dense layers)</li> <li>Use Adam Optimizer</li> </ul>	20
3		Improve the baseline model (model build in question2) performance and save the weights of improved model. Conditions to consider: <ul style="list-style-type: none"> <li>Apply Data Augmentation if required</li> </ul>	20

		<ul style="list-style-type: none"> <li>• Keep learnable parameters less than 20000</li> <li>• Can use any number of layers</li> <li>• Use any optimizers of your choice</li> <li>• Use early stopping and save best model callbacks</li> </ul>	
<b>SECTION C – 40 MARKS</b>			
4		<p>Use the Transfer learning technique to improve the previous section model's classification performance.</p> <p>The pre-trained models weights are given to you. The architecture of pre-trained model till convolution layers and its corresponding weights are already saved under the folder 'base_model'. The given model convolution layers already freezed. (Note: This pre-trained model provided is MobileNet).</p> <p>Load these weights along with architecture using the following syntax:</p> <p><b>cust_model = tf.keras.models.load_model("base_model")</b></p> <p><b>"base_model"</b> is the folder name under all the required models files are exist.</p> <p>Design the remaining layers of network in your own way (from flattening to output layer) and train only its weights with the dataset given.</p>	20
5		<p>Develop a Semantic segmentation model using Unet architecture on the given dataset. Dataset contains the Chest X-ray images of Pneumothorax diseases and the corresponding masks. Find the dataset under the folder <b>"Unet_Dataset"</b>. Students can make use of pre-trained Unet segmentation model using the library <b>import segmentation_models as sm</b></p> <p><b>Hints :</b></p> <ol style="list-style-type: none"> <li>1. Load all the images in one array of size 96x128x128x1 Where 96 is total number of trained images 128x128x3 is each image size</li> <li>2. Load all the masks in one array of size 96x128x128x1</li> <li>3. Scale both the above two arrays</li> <li>4. Split the data into train and test</li> <li>5. Define the pre-trained segmentation model. Use encoder_weight=None, If internet access is not available.</li> <li>6. Compile with appropriate loss and metric and fit the data into it.</li> <li>7. Reduce the batch_size to 1 or 2, if you get any memory related error</li> </ol> <p><b>Run the model for minimum 2 epochs and present your result. The solution will be evaluated based on approach only as it take lot of epochs to produce good result.</b></p>	20
