Section A: Mult	iple Choice Ques	stions (1 marks e	each)		
Q.1 How many v	ersions Hadoop	has			
a) One	b) Two	c <mark>) Three</mark>	d) Four		
Q.2 A Data nod	e Machine cont	ains exactly			
a) One Resource Manager					
b) One App	lication Master				
c) One Node	<mark>e Manager</mark>				
d) One MapReduce job					
Q.3 Which one of	of the following	statements is tru	ue regarding a N	/lapReduce job?	
a) Input to map	per is sorted ke	y, value pairs			
b) Number o	f mapper tasks i	s equal to numb	er reducer tasks	S.	
c) Reducer s	tarts only when	all mapper finis	<mark>n execution</mark>		
d) All of the a	above				
Q.4 Which of the	e following state	ments is correct	for an external	table of hive ?	
a) Source Da	ta gets deleted i	f external table i	s dropped		
b) <mark>Source Da</mark>	ta does not get o	deleted if the ex	<mark>ternal table is d</mark>	<mark>ropped.</mark>	
c) It provides	transaction cap	abilities like RDI	3MS		
d) None of th	ne above				
Q.5 which is the	default hive me	etastore ?			
a) <mark>Derby</mark>	b) MySQL	c) Spark-S0	QL d) HBase		
Q.6 Which amor	ng these can act	as hive execution	n engine		

10 Marks

d<mark>) Any of the above</mark>

a) MapReduce

b) Spark

c) TEZ

a) Video gaming application b) Content management application c) E-commerce applications d) All of the above Q.8 A collection in mongoDB is a) a group of related documents b) A group of data bases c) A group of schema d) A group of rows Q.9 In Spark, RDD stands for a) Rigid Distributed Dataset b) Resilient Distributed Dataset c) Realtime Distributed Dataset d) Random distributed Dataset Q.10 The various ways in which a Spark RDD can be persisted are a) Memory only b) Memory only serialized	Q.7 MongoDB can be used as backend database in which of following use cases?
c) E-commerce applications d) All of the above Q.8 A collection in mongoDB is a) a group of related documents b) A group of data bases c) A group of schema d) A group of rows Q.9 In Spark, RDD stands for a) Rigid Distributed Dataset b) Resilient Distributed Dataset c) Realtime Distributed Dataset d) Random distributed Dataset d. Random distributed Dataset Q.10 The various ways in which a Spark RDD can be persisted are a) Memory only	a) Video gaming application
d) All of the above Q.8 A collection in mongoDB is a) a group of related documents b) A group of data bases c) A group of schema d) A group of rows Q.9 In Spark, RDD stands for a) Rigid Distributed Dataset b) Resilient Distributed Dataset c) Realtime Distributed Dataset d) Random distributed Dataset d) Random distributed Dataset	b) Content management application
Q.8 A collection in mongoDB is a) a group of related documents b) A group of data bases c) A group of schema d) A group of rows Q.9 In Spark, RDD stands for a) Rigid Distributed Dataset b) Resilient Distributed Dataset c) Realtime Distributed Dataset d) Random distributed Dataset d) Random distributed Dataset	c) E-commerce applications
a) a group of related documents b) A group of data bases c) A group of schema d) A group of rows Q.9 In Spark, RDD stands for a) Rigid Distributed Dataset b) Resilient Distributed Dataset c) Realtime Distributed Dataset d) Random distributed Dataset a) Memory only	d <mark>) All of the above</mark>
a) a group of related documents b) A group of data bases c) A group of schema d) A group of rows Q.9 In Spark, RDD stands for a) Rigid Distributed Dataset b) Resilient Distributed Dataset c) Realtime Distributed Dataset d) Random distributed Dataset a) Memory only	
b) A group of data bases c) A group of schema d) A group of rows Q.9 In Spark, RDD stands for a) Rigid Distributed Dataset b) Resilient Distributed Dataset c) Realtime Distributed Dataset d) Random distributed Dataset d) Random distributed Dataset Q.10 The various ways in which a Spark RDD can be persisted are a) Memory only	Q.8 A collection in mongoDB is
c) A group of schema d) A group of rows Q.9 In Spark, RDD stands for a) Rigid Distributed Dataset b) Resilient Distributed Dataset c) Realtime Distributed Dataset d) Random distributed Dataset a) Memory only	a) <mark>a group of related documents</mark>
d) A group of rows Q.9 In Spark, RDD stands for a) Rigid Distributed Dataset b) Resilient Distributed Dataset c) Realtime Distributed Dataset d) Random distributed Dataset Q.10 The various ways in which a Spark RDD can be persisted are a) Memory only	b) A group of data bases
Q.9 In Spark, RDD stands for a) Rigid Distributed Dataset b) Resilient Distributed Dataset c) Realtime Distributed Dataset d) Random distributed Dataset Q.10 The various ways in which a Spark RDD can be persisted are a) Memory only	c) A group of schema
a) Rigid Distributed Dataset b) Resilient Distributed Dataset c) Realtime Distributed Dataset d) Random distributed Dataset Q.10 The various ways in which a Spark RDD can be persisted are a) Memory only	d) A group of rows
a) Rigid Distributed Dataset b) Resilient Distributed Dataset c) Realtime Distributed Dataset d) Random distributed Dataset Q.10 The various ways in which a Spark RDD can be persisted are a) Memory only	
b) Resilient Distributed Dataset c) Realtime Distributed Dataset d) Random distributed Dataset Q.10 The various ways in which a Spark RDD can be persisted are a) Memory only	Q.9 In Spark, RDD stands for
c) Realtime Distributed Dataset d) Random distributed Dataset Q.10 The various ways in which a Spark RDD can be persisted are a) Memory only	a) Rigid Distributed Dataset
d) Random distributed Dataset Q.10 The various ways in which a Spark RDD can be persisted are a) Memory only	b) Resilient Distributed Dataset
Q.10 The various ways in which a Spark RDD can be persisted are a) Memory only	c) Realtime Distributed Dataset
a) Memory only	d) Random distributed Dataset
a) Memory only	
	Q.10 The various ways in which a Spark RDD can be persisted are
b) Memory only serialized	a) Memory only
	b) Memory only serialized
c) Memory and hard drive	c) Memory and hard drive
d <mark>) All of the above</mark>	d <mark>) All of the above</mark>

Section B: Multiple Choice Questions (2 marks each)

10 Marks

Q.1 In Hive, command to change name of a table from t1 to t2 is: a) UPDATE TABLENAME FROM t1 to t2; b) ALTER TABLE t1 RENAME TO t2; c) RENAME TABLE FROM t1 to t2; d) UPDATE TABLE t1 AS t2; Q.2 In MongoDB, Select the correct query for displaying users name based on ascending order of the age a) db.users.find().sort({age:1}) b) db.users.find().limit() c) db.users.find() d) db.users.find().sort(age:-1) Q.3 which is the correct command syntax to copy file from local directory to HDFS directory a) hadoop fs -put < local_ directory_path> <hdfs_ directory_path> b) hadoop fs -copyFromLocal <hdfs_ directory_path> < local_ directory_path> c) hadoop fs -copy < local directory path> <hdfs directory path> d) hadoop fs -move <hdfs directory path> < local directory path> Q.4 How to rename the column name using Pyspark in Spark DataFrame a) df.withColumnRenamed(existingName, newName) b) df.withRenamed(existingName, newName) c) df.withColumn(existingName, newName) d) df.Renamed(existingName, newName) Q.5 How to convert RDD into DataFrame using Pyspark a) spark.createDataFrame(rdd, schema = Columns) b) rdd.toDF(columns) c) spark.convertDataFrame(rdd, schema = Columns)

- d) <mark>a & b</mark>
- e) a & c
- f) b&c
